

Decoding Wine Quality:

Step-by-Step Guide for Local Run

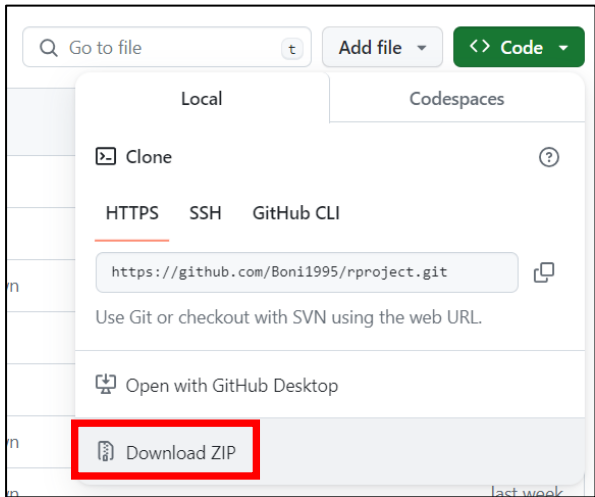

Prerequisites:

- R Studio: <https://cran.r-project.org/>
- Project folder (from GitHub): <https://github.com/Boni1995/rproject.git>

1. <> Code

2. Download ZIP

3. Save it in the location desired.

- **IMPORTANT:** Remember to extract the file (rproject) from the ZIP.

INDEX

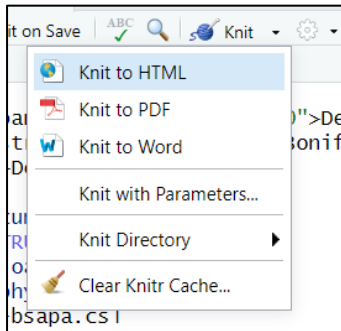

PROJECT'S R MARKDOWN (HTML)	2
PROJECT'S DASHBOARD	4

PROJECT'S R MARKDOWN (HTML)

1. From the **rproject** folder, open the file “**R markdown - 41540A.Rmd**” in **RStudio**.
2. In the **line 43**, **replace the path of the dataset** with the new location in your computer.
 - The dataset is **inside the “Dataset” folder**, in the **rproject** folder.

```
42 {r}  
43 wine_dataset <- read.csv('C:\\Users\\franc\\Documents\\GitHub\\rproject\\Dataset\\winequality.csv')  
44 }
```

3. **Knit to the desired format (HTML is recommended).**

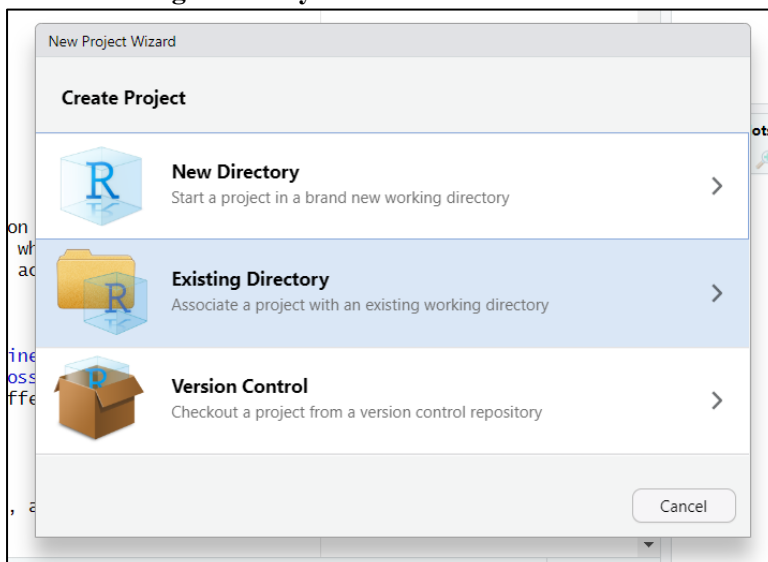

- ❖ In case you want to **continue with the analysis and investigation of this project**, using the folder downloaded from GitHub:

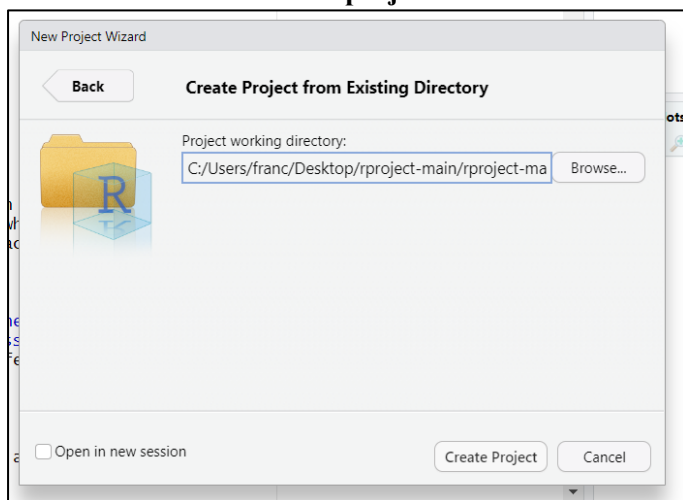

1. Go to **Project (None) > New Project...**

2. Select **Existing Directory**

3. Choose the location of the **rproject** folder and click **Create Project**

-
- ❖ Another option for working with the same folder, is using **setwd()**, but the previous suggestion is highly recommended.

PROJECT'S DASHBOARD

1. From the **rproject** folder, open the R file “**dataset_dashboard**” in **RStudio**.
2. In the **line 6**, replace the **path of the dataset** with the new location in your computer.
 - The dataset is **inside the “Dataset” folder**, in the **rproject** folder.

```
5 # Load dataset
6 dataset <- read.csv('C:\\Users\\franc\\Documents\\GitHub\\rproject\\Dataset\\winequality.csv')
```

3. Save and close the “**dataset_dashboard**” file.
4. From the **rproject** folder, open the file “**Dashboard.Rmd**” in **RStudio**.
5. **Run the document**

❖ After running document, something like this should be opened in a new window:
